Specialists in A/V Solutions ♦ Strategic Planning ♦ Architectural Acoustics

Press Release *For Immediate Release*****

April 1st 2006

R & D Industries, Inc headquartered in Milford, Iowa is pleased to announce the formation of its new engineering division Audio Engineering Group located in The Des Moines Iowa area.

Audio Engineering Group has been formed to expand upon twenty plus years of RDI's experience providing excellence in the fields of Audio / Video Systems design, strategic facility planning, and architectural acoustic consulting services.

Executive Manager and Senior Systems Engineer Mike Clark explains, "The formation of the Audio Engineering Group allows us to better serve both new and existing clients located in Central Iowa. Our expanded work within the architectural community plus our rapidly escalating customer base of houses of worship, education, and governmental clients has made this expansion something we really needed to carry out. The response from our clients and other industry contacts is one of excitement, knowing that we are bringing a company with a rock solid reputation and diverse expertise to the Des Moines market"

The new Urbandale office location for Audio Engineering Group will be led by 15 year industry veteran, Senior Systems Engineer - Todd Berger, CET. Berger remarks "This new group will be made up of some of the finest talent in the fields of professional A/V systems and architectural acoustics. The team we continue to assemble in Des Moines comes from a great mix of real world experience and pertinent academic backgrounds. Coupling this talent with our fundamentally strong engineering philosophy will allow this new division to provide an extensive collection of services previously unavailable in the area."

Much of the company's past success has been centered on religious facilities making Audio Engineering Group an ideal choice when it comes to integrating technology properly in houses of worship. Their thorough understanding of clients' needs and expectations in conjunction with a professional staff with expansive technical expertise has been the cornerstone of past achievements.

While this house of worship specialty will continue to be a major focus of the company's efforts, it will also coincide with continued expansion into other areas of the construction and professional design markets. Additionally, Audio Engineering Group shall continue to offer consulting engineering services to contracting companies which may require a higher level of design services.

Audio Engineering Group will work closely with the parent company R & D Industries, Inc. which continues to provide contracting services to clients throughout the Midwest. This will allow the company to provide a turn key approach for clients taking projects from the conceptual design stages, all the way through to integration, support, and training.

Since 1984 R & D Industries, Inc has been a leader in the design & installation of professional A/V solutions for religious, educational, governmental, and corporate clients. Specializing in advanced computer aided acoustical analysis / prediction, together with accurate acoustical measurement techniques, RDI provides project planning, acoustical consultation, and A/V design services to end users and design professionals throughout the Midwest.
