"Local acoustical consultants featured in national magazine"

Due to the excellent outcome of a recent project, the professional acoustical consultants from R & D Industries, Inc. in Milford, Ia., were featured in a respected national trade magazine, "Church Production Magazine."

R & D Industries systems engineer Todd Berger of Milford worked as the acoustical consultant for the new Community Heights Alliance Church project in Newton, Ia. and was interviewed for the article which highlights the success of the project. The article appears in the November/December 2003 edition of the magazine and is entitled, "Community Heights Expands Church".

During the project, Berger worked closely with the church's in-house technical staff to control the acoustical outcome of the newly-constructed worship and multipurpose space. The project demonstrated the importance of considering optimal acoustics as it relates to functionality when designing or remodeling an enclosed space.

"It's always nice to be recognized for our commitment to provide clients with acoustical and sound reinforcement services that are second-to-none," said Berger. "To have our work featured in a national trade magazine is certainly a treat for us."

For two decades, R & D Industries, Inc. has remained a regional leader in architectural acoustics and in the design, engineering and implementation of quality sound and visual systems. Their team of dedicated professionals has assisted hundreds of clients with the planning and design of thousands of successful projects both in the Midwest and throughout the country.
