

Key Objectives:

- Redesign and engineer an up-to-date audio system.
- Aesthetically pleasing installation.
- Great speech and music quality.
- Digital stage box for praise band connectivity.
- Long term solution.

Christ Family Church of Davenport, IA

System Overview

With a desire to enhance church worship and activities, Christ Family Church of Davenport contacted RDI for a solution. The main components of the new system include a line array speaker system with subwoofers and a new digital mixer. The line arrays deliver Christ Family Church with clarity for speech and powerful punch for the praise band. A new digital mixer allows the church to store numerous scenes for different types of performances at the church. They can also control the mixer from anywhere in the sanctuary wirelessly with an iPad. Gain and EQ adjustments are simplified in the digital mixer to give even novice users confidence in optimizing the sound. With a new system, Christ Family Church can succeed for years to come.

Key System Features

- Professionally designed and engineered sound reinforcement system.
- Line array speakers with subs for superb quality.
- New digital mixer that can be controlled wirelessly.
- DSP for control and precise calibrations of line array.
- Stage box for praise band inputs and outputs.
- Superior speech intelligibility and music quality.
