

Key Objectives:

- Redesign and Engineer an up to date Audio system.
- Aesthetically pleasing installation.
- Superior speech and audio quality
- Current and future solutions in mind.

Stonebrook Church

System Overview

Stonebrook Church in Ames, IA called on RDI to improve the audio system in their sanctuary. For such a large place to provide superior audio quality, RDI installed two line arrays in order to achieve this goal. Subwoofers and front fills were built into Stonebrook's newly remodeled stage. A new digital mixer, high powered amps, and a state of the art digital signal processor completed one of the most powerful, crisp, and clean systems we have been fortunate to install. All new in-ear monitors were also installed for the praise band for better control of individual mixes.

Key System Features

- Professionally designed and engineered sound reinforcement.
- Line array speakers for superior speech intelligibility and audio playback
- New Digital Mixer
- High output amps and state of the art DSP
- New in-ear monitors for praise band
- Redesigned floor boxes for inputs

Stonebrook Church

Facility Type

House of Worship

Solutions

Sound Reinforcement

Equipment Rack & New Digital Mixer

Floor Box Inputs & Sub & Fills Built Into Stage

"My favorite part of our new system is the overall sound — it is the same volume no matter where you are and because our speakers no longer compete with each other, the sound is far cleaner."

-Scott Hansen
