Private & Local

Cloud Hosting
Local Experts. Private Cloud. Local Data Centers.

A business can have hundreds of records, and critical information that needs to be securely stored. RDI cloud hosting is a private and more secure alternative to other cloud services that already exist in larger enterprises such as Amazon or Microsoft. As a trusted local provider of secure cloud hosting, RDI is a company you can put a face to and trust. By allowing granular controls of permission to access the files that you share in your office or with outside recipients, a higher level of security is achieved. RDI integrates additional safety features, such as data revocation, host web protection, and secure file sync, making RDI Cloud Hosting a secure, dependable product.

Proven, Secure, High-Performance Cloud Hosting

Every business is unique, and infrastructure solutions should be tailored to the specific needs of each business or project. RDI offers a full spectrum of cloud services,

including custom private clouds and hybrid clouds. RDI's private and hybrid cloud solutions can accommodate any combination of scaling, regulatory compliance, security, privacy, and performance. Our cloud solutions provide a powerful, proactive IT monitoring platform, incorporating the important monitoring and management capabilities you need for your data center and the cloud.

Custom Plans Made For You

Once aware of your IT infrastructure and needs, we optimize a hosting solution around your business objectives, plans for growth and risk management. We rely on multiple redundant fiber circuits connecting our data centers to provide high throughput and load balanced connectivity, ideal for supporting your multi-site business workplace scenarios. Another of the many benefits of RDI Cloud Hosting services is that our services move businesses

into an affordable and predictable business model where managed services are purchased on an as-needed basis without the requirement for large amounts of capital. With RDI managed services, businesses more easily maintain hosting advantages that allow for scaling up or down as needed and are better able to predict costs to reduce internal labor dramatically.
